WORK EXPERIENCE

Zoom Digital Dubai

Dubai, UAE

Backend Developer

Jan 2024 - Oct 2024

- Designed and implemented backend services and APIs using Python and TypeScript for client applications.
- Optimized MySQL databases, implementing indexing, caching, and ORM frameworks to improve query performance by up to 35%.
- Migrated legacy PHP-based solutions to modern Python/TypeScript microservices, increasing scalability and reducing maintenance costs.
- Collaborated with frontend engineers, UI/UX designers, and project managers in an agile workflow, delivering backend solutions for eCommerce and enterprise clients.

Afiniti Ltd

Karachi, Pakistan

Software Quality Assurance Tester

July 2020 - Sep 2020

- Contributed to the development of AI-driven customer experience optimization solutions, leveraging Python for data preprocessing, feature engineering, and model prototyping.
- Supported the training and evaluation of machine learning models for pattern recognition and predictive analytics.
- Documented findings, workflows, and model performance on GitHub, ensuring reproducibility and knowledge sharing across teams.

EDUCATION

SZABIST Dubai

Dubai, UAE

Bachelor's in Computer Science

Sep 2021 - June 2025

- 3.74 CGPA
- Awarded with a Silver Medal for achieving the second highest CGPA

SKILLS

- **Python:** Django, Flask, TensorFlow, PyTorch, Scikit-Learn, Pandas, NumPy, OpenCV
- **Javascript:** Node.js, React.js, Express, Vite
- **Java:** Spring Boot, Server-side rendering
- **Cloud and DevOPs:** AWS (Lambda, S3, API Gateway, DynamoDB, EC2, CloudWatch), Docker, GitHub
- **Databases:** PostgreSQL, DynamoDB, MySQL, MongoDB
- **Languages:** English, Urdu, German (A1)

CERTIFICATIONS

• Python Specialization	Coursera
• Web Applications Specialization	Coursera
• Java Spring Boot	CodeWithMosh
• Machine Learning Certification	Analytics Vidhya
• Microsoft Learn Student Ambassador (2021 - 2022)	Microsoft

KEY PROJECTS

IsharahNow

Final Year Project (2025)

Lead Backend and AI Engineer

- Designed and implemented an AI-powered web application that translates live speech into sign language in real-time, enhancing accessibility for the hearing-impaired community.
- Developed backend services in Python to handle real-time video streaming, preprocessing, and model inference.
- Engineered RESTful APIs to integrate sign-language recognition models with a Next.js frontend.
- Deployed AI microservices on AWS Lambda, EC2, and S3, ensuring scalability, cost efficiency, and low-latency processing.
- Integrated AWS DynamoDB for storing and retrieving sign language video metadata and session logs

Breast Cancer Detection

Self-Initiated Project (2024)

- Developed a machine learning model in Python using Logistic Regression to predict breast cancer from patient datasets with high accuracy and reliability.
- Performed data preprocessing and feature engineering using Pandas and NumPy, handling missing values, scaling features, and encoding categorical data.
- Conducted exploratory data analysis (EDA) with Matplotlib and Seaborn to identify key predictive features and visualize patterns.

Network Infrastructure Design for SZABIST

Semester Project (2023)

Network Systems Designer

- Configured and deployed network services including DNS, DHCP, and IP addressing for the entire SZABIST system.
- Used network simulation tool Cisco Packet Tracer to simulate network traffic and ensure optimal configurations.
- Ensured secure and scalable network design for classrooms, labs, and administration offices.
- Monitored network performance and addressed issues related to connectivity, security, and system reliability.
